National Hemp Variety Testing Across the US in 2022

Trial ID: REGIONAL HEMP VARIETY TRIAL Location: Great Bend, KS Trial Year: 2022
 Protocol ID: REGIONAL HEMP VARIETY TRIAL Investigator (Creator): Melissa L. Nelson
 Project ID: Study Director: Melissa L. Nelson
 Sponsor Contact: Mandi Kerr

General Trial Information

Study Director: Melissa L. Nelson **Title:** Field Scientist
Investigator: Melissa L. Nelson **Title:** Field Scientist

Discipline: S varietal screening
Trial Status: E established

Trial Reliability: 1 usable data

ARM Trial Created On: Mar-31-2022

Initiation Date: Apr-20-2022 **Planned Completion Date:** Aug-30-2022

Completion Date: Sep-25-2022

Trial Location

City: Great Bend **Country:** USA United States
State/Prov.: Kansas
Postal Code: 67530 **Climate Zone:** USWARM US Warm Continental

Latitude of LL Corner °: 38.279762 N
Longitude of LL Corner °: -98.86544 W
GPS Accuracy of LL Corner: 16 FT
Altitude of LL Corner: 1909.00 FT
Angle y-axis to North °: 90

Directions:

From Great Bend, KS travel West out of town on 156/56 Hwy until you reach 50th Ave. Turn South. Farm entrance is located 1.25 miles from the turn. Field is the Southeast Circle.

Conducted Under GLP: No
Conducted Under GEP: No

Objectives:

Objectives:

1. Evaluate the performance of 10 major fiber hemp varieties across the US using different agronomic indicators (i.e. yield, biotic and abiotic stress at emergence, vegetative, and reproductive stages).
2. Assess agronomic yield per variety based upon overall tonnage of the plant.

Crop Description

Crop 1: C CNISA Cannabis sativa hemp
Entry Date: Apr-20-2022 **Stage Scale:** BBCH
Variety: Variety Trial
Seed Shape: SMALL
Planting Date: Apr-20-2022 **Planting Rate:** 900000 S/A
Depth: 0.5 IN
Rows per Plot: 9 **Planting Method:** DRILLE drilled
Row Spacing: 7.5 IN **Planting Equipment:** PD plot drilling machine
Soil Temperature: 70 F **Seed Bed:** MEDIUM medium
Emergence Date: Apr-26-2022 **Soil Moisture:** DRY dry
Harvest Date: Sep-1-2022 **Harvest Equipment:** 9' Side Sickle
Harvested Width: 6 FT
Harvested Length: 40 FT

Site and Design

Treated Plot Width: 6 FT **Site Type:** FIELD field
Treated Plot Length: 40 FT **Experimental Unit:** 1 PLOT plot
Treated Plot Area: 240.0 FT2 **Treatments:** 10 **Tillage Type:** MINTIL minimum-till
Replications: 4 **Study Design:** RAOBL Randomized Complete Block (RCB)
% Slope: 1

Trial Comments

TITLE: National Hemp Variety Testing Across the US in 2022. (PCR 22-021)

OBJECTIVE:

1. Evaluate the performance of 10 major fiber hemp varieties across the US using different agronomic indicators (i.e. yield, biotic and abiotic stress at emergence, vegetative, and reproductive stages).
2. Assess agronomic yield per variety based upon overall tonnage of the plant.

Varieties and Seeds/Pound (for planting calculation purposes):

Variety No.	Variety	Seeds Per Pound
1	Bialobrzkeski	34,626
2	Futura 83	23,502
3	Fibror 79	22,126
4	Yuma (Chinese Origin)	14,131
5	MS77	16,989
6	Puma	14,538
7	JinMa	13,787
8	CRS-2	28,350
9	Rajan	30,039
10	IH Williams (SS Beta)	33,057

Project ID:	Study Director: Melissa L. Nelson	
	Sponsor Contact: Mandi Kerr	

MATERIALS & METHODS:

The irrigated center pivot field is located 3.5 miles Southwest of Great Bend, Kansas in Barton County. Legal description is SE ¼ 27S 20W 14. The soil type is Carwile fine sandy loam, 0 to 1 percent slopes. The experiment was conducted as a randomized complete block design with four replications. The field data were subjected to analysis of variance, and treatment means were separated at the 5% level of probability.

Latitude: 38.279762 N

On 04/12/2022, manure was spread across the field at a rate of 40 pounds/acre.

On 04/13/2022, manure (fertilizer) was worked into the soil with a vertical tillage machine at a depth of 4 inches.

On 04/20/2022, **Application 'A'** seed varieties were drilled at a target rate of 900,000 seeds/acre into a vertical-till medium trashy seedbed using 2019 6-foot Kincaid Plot Drill. The first precipitation event occurred 3 days later on 04/23/2022 with 0.25 inches falling. No pre-emerge maintenance applications were used.

Industrial hemp varieties emerged on 04/26/2022.

On 04/28/2022, 0.50 inches of irrigation water was applied to the field.

On 05/01/2022, 0.30 inches of irrigation water was applied to the field.

On 05/04/2022 (8 Days after Emergence (DAE)) stand counts were completed with 3 feet of row counted. Statistical differences were noted between varieties with Varieties 1 – 4 with the highest emergence rates ranging from 31.3 plants per 3-foot (Variety 3) to 36.0 plants per 3-foot (Variety 1). This calculates to 650,022 plants per acre to 823,270 plants per acre, respectively. The next statistical grouping ranged from 21.0 plants per 3-foot (Variety 10) to 24.0 plants per 3-foot (Variety 5). This calculates to 460,228 plants per acre to 544,794 plants per acre, respectively. The slowest to emerge with 10.8 plants per 3-foot (Variety 7) and 18.8 plants per 3-foot (Variety 9). This calculates to 248,393 plants per acre to 435,180 plants per acre, respectively. See column 1 & 2 in assessment data.

Vigor Scores were also completed for each variety using the following format:

Vigor Score System				
Crop is less than 10% emerged. Would be considered a failed crop by general farming practices.	Crop is noticeably behind in terms of emergence (approximately 25%), overall health, size, etc. is significantly less than ideal.	Crop 75% throughout the plot. Leaf and stem coloring is consistent.	Crop is healthy with +90% emergence throughout the plot. Leaf and stem coloring is consistent. No disease is present.	Crop is extremely advanced compared to other plots. A grower would immediately recognize differences.
1	2	3	4	5

On 05/04/2022 (8 DAE) vigor scores evaluated Variety 4 with the highest vigor rating at 4. Treatments 1 – 3 & 6

Performance Crop Research

National Hemp Variety Testing Across the US in 2022

Trial ID: REGIONAL HEMP VARIETY TRIAL	Location: Great Bend, KS	Trial Year: 2022
Protocol ID: REGIONAL HEMP VARIETY TRIAL	Investigator (Creator): Melissa L. Nelson	
Project ID:	Study Director: Melissa L. Nelson	
	Sponsor Contact: Mandi Kerr	

received a score of 3. Treatments 5, 9 & 10 received a score of 2. Plants were slower shorter and showing signs of slight chlorosis. Treatments 7 & 8 received a score of 1.0. One rated plot were poor emergence and the plots that did come up with yellow and not vigorous in appearance (slightly stunted)

On 05/18/2022 (22 DAE) stand counts were completed with 3 feet of row counted. Final stand counts per acre and their germination rate are as follows: This can be referenced in Column 5 & 6 in Assessment Data.

Variety No.	Variety	Final Pop/A	% Germination
1	Bialobrzkeski	728,712	77.1
2	Futura 83	595,439	69.1
3	Fibror 79	671,365	77.1
4	Yuma (Chinese Origin)	659,309	75.8
5	MS77	643,195	75.5
6	Puma	470,314	52.9
7	JinMa	329,205	36.8
8	CRS-2	467,674	52.3
9	Rajan	501,508	58.7
10	IH Williams (SS Beta)	491,837	56.8

Vigor Scores were completed using the same rubric as prior assessment. Variety 5 & 6 scored at 5 because of rapid growth (height), color and % plot fill. Varieties 1, 3 & 4 scored a 4 because of emergence scores and overall health of the plant was visuably less than Varieties 5 & 6.

Plant Heights were measured with 5 representative plants from each plot measured and recorded in inches. Heights ranged from 19.0 inches (Variety 8) to 55.5 inches (Variety 2).

On 06/23/2022, 0.75 inches of irrigation water was applied to the field.

On 07/01/2022, 1.00 inch of irrigation water was applied to the field.

On 07/04/2022, 0.30 inches of irrigation water was applied to the field. 35 pounds of 32% Nitrogen was applied via center pivot irrigation.

On 07/14/2022, 0.75 inches of irrigation water was applied to the field.

On 07/19/2022, 1.00 inch of irrigation water was applied to the field.

On 07/23/2022, 0.30 inches of irrigation water was applied to the field. 35 pounds of 32% Nitrogen was applied via center pivot irrigation.

On 07/27/2022 (92 DAE) plant heights were measured with 5 representative plants from each plot measured and recorded in inches. Heights ranged from 32.8 inches (Variety 9) to 72.7 inches (Variety 7).

	Sponsor Contact: Mandi Kerr	

On 07/28/2022, 1.00 inch of irrigation water was applied to the field.

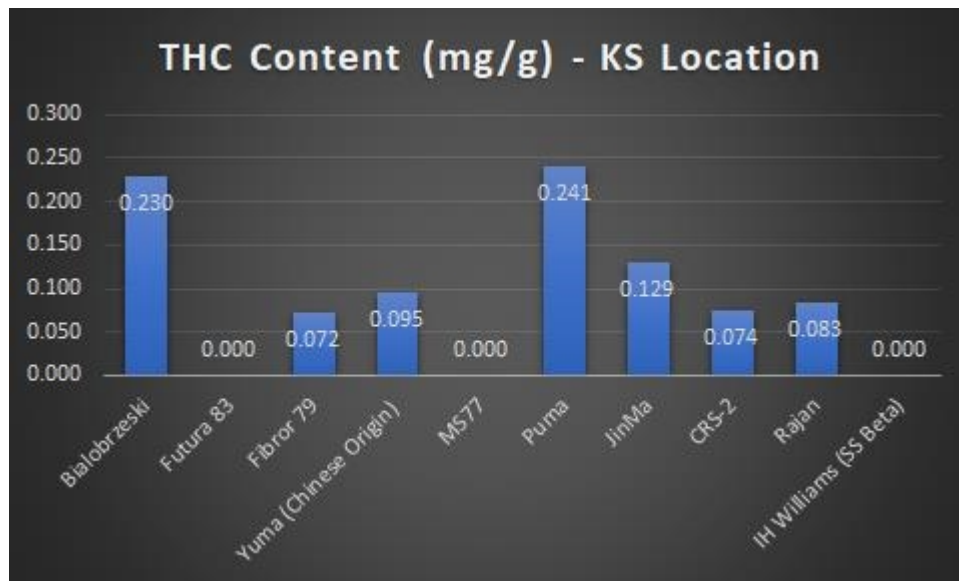

On 08/03/2022, 1.00 inch of irrigation water was applied to the field.

On 08/08/2022 (104 DAE) plant heights were measured with 5 representative plants from each plot measured and recorded in inches. Heights ranged from 32.8 inches (Variety 9) to 86.6 inches (Variety 7).

On 08/09/2022, 1.00 inch of irrigation water was applied to the field.

On 08/17/2022, 0.75 inches of irrigation water was applied to the field.

On 08/22/2022 (118 DAE), THC samples were completed and sent to an accredited Lab #80585, ProVerde laboratory in Massachusetts. Sampling guidelines from the USDA were followed and a dried composite sample by variety were priority mailed to the lab. Variety 2, 5, and 10 showed non detectable levels of THC. The highest THC content was Variety 6 with 0.24 mg/g Total THC. Specific variety information can be found in Column 13.

On 08/26/2022, 1.00 inch of irrigation water was applied to the field.

On 08/29/2022, 0.50 inches of irrigation water was applied to the field.

On 08/30/2022 (126 DAE) final plant heights were measured with 5 representative plants from each plot measured and recorded in inches. Heights ranged from 32.8 inches (Variety 9) to 98.5 inches (Variety 7).

This graph shows the plant height changes over the course of the trial. I believe Bialobrzieski and Rajan show higher plant heights the first rating timing compared to the final three because the males were predominantly taller and after pollination was completed, they died and the females were remaining in the plot.

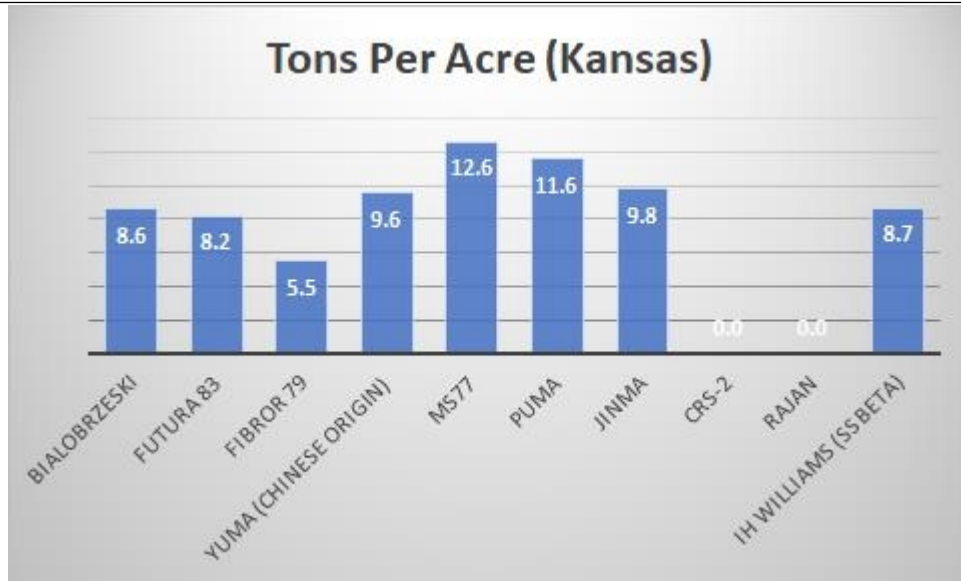

On 09/01/2022 (127 DAE), plots were harvested with a 9' side sickle pulled with a Puma 150 tractor. Cut height was 3.0 inches off the ground. Yields ranged from 60.7 pounds per plot (Variety 3) to 138.7 pounds per plot (Variety 5), which calculates to 11,011 pounds per acre (5.5 tons/A) to 25,168 pounds per acre (12.6 ton/A), respectively. This is a wet weight.

Images are showing yields in pounds and tons for each variety in Kansas.

Variety 8 and Variety 9 were not harvested due to poor stands and high weed pressure. While Variety 8 showed promise at the beginning of the season with the height at 32.8 inches and poor stand palmer amaranth overtook the plot and choked Variety 8 out.

Varieties 1 – 3 could not sustain the heat and dry weather of Kansas. Flowered very prematurely for a fiber crop to be considered successful. Once variety entered the flowering state, vegetative growth ceased.

No maintenance herbicide applications were applied on this trial. Crop destruct will be completed and crop will not enter commercial commerce.

Rainfall and temperature data were obtained from GMD#5 Station #7 – Great Bend. The minimum temperatures and the maximum temperatures were comparable to the 30-year Great Bend weather (1991 and 2021) between April’s application through August’s final evaluation. A total of 11.67 inches of rain was received during the growing season, which was 7.74 inches less than the historical average rainfall amount. The industrial hemp field received 10.55 inches of overhead irrigation throughout the trial to supplement for rainfall.

Performance Crop Research

National Hemp Variety Testing Across the US in 2022

Trial ID: REGIONAL HEMP VARIETY TRIAL Location: Great Bend, KS Trial Year: 2022
 Protocol ID: REGIONAL HEMP VARIETY TRIAL Investigator (Creator): Melissa L. Nelson
 Project ID: Study Director: Melissa L. Nelson
 Sponsor Contact: Mandi Kerr

Crop Type Code
 C = EPPO species (Bayer) codes
 CNISS, BDIC, Cannabis sp., Hemp = US

Part Rated
 PLANT = plant
 C = Crop is Part Rated

Rating Type
 COUPLA = count - plant / emergence - objective
 VIGOR = vigor
 GERRAT = germination rate
 FLOW50 = flowering - 50 % flowers open
 HEIGHT = height
 WEIGHT = weight
 YIELD = yield

Rating Unit/Min/Max
 NUMBER, , = number
 1-5, 1, 5 = 1-5 index/scale
 %, 0, 100 = percent
 DATE, , = calendar date
 IN, , = inch
 lb/plot, , = pounds per plot
 lb/ac, , = pounds per acre
 T-US, , = ton (short=2000 lb)

PLOT = total plot
 TREATM = treatment

ROWFT = row-foot
 A = acre
 PLOT = total plot
 PLATOP = plant top

Rating Timing
 A2 = 2nd Assessment According to trial Schedule
 H1 = 1st Harvest

ARM Action Codes
 ET9 = Excluded treatment 9
 AL = Automatic log transformation of X+1
 ET4 = Excluded treatment 4
 ER2 = Excluded replicate 2
 $T3 = (43560/(7.5/12)) * ([C1]/3)$
 $T4 = ([C5]/900000) * 100$
 $T1 = ([C14] * 43560) / 240$
 $T2 = [C15] / 2000$

Crop Type Code

C = EPPO species (Bayer) codes
 CNISS, BDIC, Cannabis sp., Hemp = US

Part Rated

PLANT = plant
 C = Crop is Part Rated

Rating Type

COUPLA = count - plant / emergence - objective
 VIGOR = vigor
 GERRAT = germination rate
 FLOW50 = flowering - 50 % flowers open
 HEIGHT = height
 WEIGHT = weight
 YIELD = yield

Rating Unit/Min/Max

NUMBER, , = number
 1-5, 1, 5 = 1-5 index/scale
 %, 0, 100 = percent
 DATE, , = calendar date
 IN, , = inch
 lb/plot, , = pounds per plot
 lb/ac, , = pounds per acre
 T-US, , = ton (short=2000 lb)

PLOT = total plot
 TREATM = treatment

ROWFT = row-foot

A = acre

PLOT = total plot

PLATOP = plant top

Rating Timing

A2 = 2nd Assessment According to trial Schedule

H1 = 1st Harvest

ARM Action Codes

ET9 = Excluded treatment 9

AL = Automatic log transformation of X+1

ET4 = Excluded treatment 4

ER2 = Excluded replicate 2

T3 = $(43560/(7.5/12)) * ([C1]/3)$

T4 = $([C5]/900000) * 100$

T1 = $([C14] * 43560) / 240$

T2 = $[C15] / 2000$
